RESULT FOR QUERY

I've synthesized the latest industry research and clinical data on Metabolic Dysfunction-Associated Steatotic Liver Disease (MASLD) and its progressive form, Metabolic Dysfunction-Associated Steatohepatitis (MASH). The market is currently undergoing a massive shift due to the 2024 approval of the first MASH treatment, Rezdiffra, and the rapid entry of GLP-1 therapies into the therapeutic landscape. Analysts view 2026 as a pivotal year for the space, driven by critical Phase 3 readouts from companies like Madrigal, Akero, and Inventiva, alongside significant M&A activity from global pharmaceutical giants like Roche and Novo Nordisk.

> *We believe 2026 will be a significant year for the MASH space given multiple key data readouts and broad market expansion. Specifically, MASH represents a multi- blockbuster opportunity with ~680K diagnosed F2/F3 and ~245K F4c US patients where F4c represents an untapped market prime for liver-targeted treatments (given nothing is currently approved).* [1]

1 • PiperSandler Research Yasmeen Rahimi, Ph.D.

Market Overview and Epidemiology

The MASH market represents a multi-blockbuster opportunity driven by a global surge in obesity and metabolic dysregulation. [2] Industry estimates suggest that MASLD affects approximately 30-38% of the adult population worldwide, with prevalence in Europe reaching 25-30%. [3] The condition is recognized as a leading driver of chronic liver disease, cirrhosis, and hepatocellular carcinoma (HCC). [4]

2 • PiperSandler Research Yasmeen Rahimi, Ph.D. 3 • Nutrients (MDPI) 4 • Biomedicines (MDPI)

> *The management emphasized MASH remains an attractive indication with 32% adults globally with metabolic dysfunction associated liver disease (MASLD) which are at risk of MASH.* [5]

5 • mBank Biuro maklerskie

US Patient Population and Diagnosis

- **Diagnosed Population:** As of year-end 2025, there are approximately 680,000 diagnosed F2/F3 MASH patients in the US, reflecting nearly 50% growth from 2023 estimates due to increased disease awareness and

specialist care. [6] 6 • PiperSandler Research Yasmeen Rahimi, Ph.D.

- **Advanced Disease:** There are approximately 245,000 addressable US patients with F4 compensated cirrhosis (F4c), a population with high unmet need and 42x greater risk of liver-related mortality than earlier stages. [7] 7 • PiperSandler Research Yasmeen Rahimi, Ph.D.
- **Diagnosis Rates:** Only about 10% of MASH patients are currently diagnosed, though this rate is expected to rise as non-invasive tests (NITs) like FibroScan and the ELF test become more common in primary care and endocrinology settings. [8] 8 • PiperSandler Research Yasmeen Rahimi, Ph.D.
- **Nomenclature Shift:** The transition from NAFLD/NASH to MASLD/MASH was implemented to reduce stigma and better reflect the underlying metabolic pathophysiology, though it is not expected to materially change patient volume estimates. [9] 9 • TD Cowen

Competitive Landscape and Commercial Dynamics

The "pharmafication" of the MASH space is accelerating, with large pharmaceutical companies increasingly dominating the landscape through acquisitions and internal development. [10] 10 • Canaccord Genuity

Commercial Leaders

- **Madrigal Pharmaceuticals (Rezdiffra):** As the first FDA-approved oral THR-β agonist, Rezdiffra is seeing strong early adoption, with over 23,000 patients on therapy as of 2Q25. [11] Management is targeting approximately 315,000 diagnosed F2/F3 patients currently under specialist care. [12] 11 12 • TD Cowen
- **Novo Nordisk (Wegovy):** Approved for MASH by the FDA in August 2025, Wegovy is already impacting the market, with its share of newly written prescriptions rising from 4% to 21% between November 2024 and November 2025. [13] 13 • Deutsche Bank Research
- **Eli Lilly (Zepbound/Tirzepatide):** Phase 2 data for tirzepatide showed MASH resolution rates as high as 62% in the 15mg dose group, significantly outperforming placebo. [14] [15] 14 • TD Cowen

Global MASH treatment pipeline: Targeting GLP-1

Company	Pipeline	Stage	Target	Injection	Cut off	MASH stage	Portion of improved MASH patients	Portion of fibrosis improvement	Fatty liver reduction
Novo Nordisk	Semaglutide (2.4mg)	Accelerated approval	GLP-1	SC, QW	72wk (P3, Par1)	F2/3	**63% vs placebo group 34%, placebo-adjusted effect of 29%(P<0.001)**	**37% vs placebo group 23%), placebo-adjusted effect of 15%(P<0.001)**	-
Eli Lilly	Tirpepatide	Phase III	GLP-1/ GIP	SC, QW	52wk (P2)	F2/3	5mg 44%, 10mg 56%m 15mg 62% (vs placebo group 10%)	5mg 25%, 10mg 51%m 15mg 51% (vs placebo group 30%)	46%(5mg) 41%(10mg) 57%(15mg) placebo group (10%)
Boehringer Ingelheim/ Zealand Pharma	Survodutide	Phase III	GCG/ GLP-1	SC, QW	48wk (P2)	F1~3	**47%(2.4mg), 62%(4.8mg), 43%(6mg) (vs** placebo group **14%)**	**34%(2.4mg),36% (4.8mg), 34%(6mg) vs** placebo group **22% (p-value undisclosed)**	+ 30% improvement 63%(2.4mg), 67%(4.8mg) 57%(6.0mg) placebo group 14%
MSD/ Hanmi	**Efinopegdutide**	Phase IIb	**GLP-1/ GCG**	**SC, QW**	**24wk (P2a)**	**F2/3**	-	-	**73% (+30% improvement 82%)**
Altimmune	Pemvidutide	Phase IIb	GLP-1/ GCG	SC, QW	24wk (P2b top-line)	F2/3	* MASH resolution 59.1% (1.2mg)/ 52.1% (1.8mg) vs 19.1% (placebo group)	31.8% (1.2mg) 34.5% (1.8mg) vs 25.9% (placebo group) (missed p-value)	58.0% (1.2mg) 62.8% (1.8mg) vs 16.2% (placebo group)
D&D Pharmatech	DD01	Phase II	GLP-1/GCG	SC, QW	12wk	F1~3			**62%** (vs 8%) **76%** (vs 12%) **(improvement by over 30%)**

Key M&A and Partnerships

- **Novo Nordisk / Akero Therapeutics:** In October 2025, Novo Nordisk acquired Akero for up to $5.20 billion to secure efruxifermin, a late-stage FGF21 analog. [17] 17 • Shinhan Investment Corp
- **Roche / 89bio:** Roche entered the MASH space in September 2025 via a $3.50 billion deal with 89bio for its Phase 3 asset, pegozafermin. [18] 18 • Shinhan Investment Corp
- **Hanmi Pharmaceutical / Merck (MSD):** Hanmi's efinopegdutide was licensed to Merck; a global Phase 2b trial was completed in late 2025, with data expected in 1H26. [19] 19 • Shinhan Investment Corp

Pipeline and Clinical Catalysts (2026)

The year 2026 is expected to feature several high-impact data readouts that will shape the future of MASH combination therapies and advanced stage treatments. [20] 20 • PiperSandler Research Yasmeen Rahimi, Ph.D.

Company	Asset	Mechanism	Catalyst Timing	Source
Inventiva	Lanifibranor	Pan-PPAR agonist	2H26 (Ph3 NATiV3 topline)	[21]
Sagimet Bioscience	Denifanstat + Rezdiffra	FASN + THR-β	1H26 (Ph1 combo data)	[22]
Akero Therapeutics	Efruxifermin	FGF21 analog	1H27 (Ph3 SYNCHRONY 52-wk)	[23]
D&D Pharmatech	DD01	GLP-1/GCG agonist	May 27, 2026 (Ph2 EASL data)	[24]
Hanmi Pharm	Efocipegtrutide	GLP/GIP/GCG	2H26 (Ph2b topline)	[25]
Molecure	OATD-01	Chitinase inhibitor	1H26 (Ph2 interim analysis)	[26]

Diagnostic and Therapeutic Evolution

Industry experts highlight a move toward non-invasive monitoring and personalized medicine to improve patient outcomes and payor acceptance. [27] 27 • TD Cowen

- **Non-Invasive Diagnostics:** Advances in technologies like ENDRA Life Sciences' TAEUS liver device, which demonstrates MRI-level accuracy in measuring liver fat, are expected to facilitate broader screening in point-of-care settings. [28] 28 • Benzinga
- **Composite Metabolic Indices:** New predictive markers such as TyG-BMI and METS-IR are being evaluated as robust tools for early MASLD risk stratification in population-level settings. [29] 29 • Research Square
- **Lifestyle and Nutrition:** Systematic reviews of randomized controlled trials (2020-2026) continue to emphasize the role of Mediterranean and DASH diets, alongside structured exercise, as cornerstones of MASLD management, particularly while pharmacological options remain limited to specific stages. [30] [31] 30 • Nutrients (MDPI) 31 • Clinical Trials Daily
- **Combination Therapy:** Analysts believe the "ultimate endgame" for MASH treatment involves combination therapies that target multiple pathways simultaneously, such as combining THR-β agonists with GLP-1 or FGF21 analogs to address both liver health and metabolic comorbidities. [32] 32 • Canaccord Genuity

> *Evolution of MASH diagnosis & treatment landscape over time: On the recent changes in the MASH space, our KOL, Dr. Stein, noted that the introduction of non-invasive diagnostics such as FibroScan and serum biomarkers (e.g., ELF test) has enabled broader fibrosis staging and earlier identification of at-risk MASH patients. [33]*

33 • Jefferies Research

Strategic Outlook and Risks

The high growth potential of the MASH market is tempered by significant developmental and regulatory hurdles. [34] 34 • Hana Financial Investment

- **Clinical Success Rates:** Based on 2025 statistics, the success rate for new drugs transitioning from Phase 1 to approval remains challenging at approximately 7%, emphasizing the high failure risk in metabolic drug development. [35] 35 • Hana Financial Investment
- **Pricing and Access:** Payors are increasingly concerned with identifying the appropriate patients for high-cost drug therapies, which is driving the development of stricter response-assessment methodologies to manage costs. [36] 36 • TD Cowen
- **Future Modalities:** Emerging research is exploring nanotechnology-based drug delivery and partial epigenetic reprogramming as potential future strategies to treat chronic liver fibrosis and steatosis. [37] [38] 37 • Pharmaceutics (MDPI) 38 • Vaccine Daily

Final results for several long-term outcomes studies, including Akero's SYNCHRONY Outcomes trial, are not expected until mid-2028, ensuring that MASH remains a high-activity area for investors for several years. [39] 39 • Canaccord Genuity
